

Aman Imran

Castro Valley, CA | 510-753-0173 | abdullahimran234@gmail.com | [linkedin.com/in/amanimran](https://www.linkedin.com/in/amanimran)

SUMMARY

Security, Trust & Safety, and AI-focused professional with 7+ years of experience across large-scale platforms (YouTube, Meta, Google, TikTok, Anthropic). Proven track record of leading high-severity investigations, managing end-to-end incident response, and improving detection systems at scale. Skilled in translating ambiguous risk signals into high-impact enforcement and detection strategies using Python and SQL. Recognized for strong ownership, cross-functional leadership, sound judgment in high-risk environments, and the ability to drive measurable improvements in precision, recall, and operational efficiency.

EDUCATION

San José State University

Dec 2025

B.S. Software Engineering

CORE SKILLS

- **Trust & Safety / AI Safety:** Content moderation, abuse detection, fraud investigation, adversarial misuse (jailbreaks, prompt injection), policy enforcement, risk analysis
- **Investigations & Incident Response:** Full incident response lifecycle (detection, triage, containment, remediation), escalation management, root-cause analysis, threat analysis
- **Security Operations (GSOC):** Threat monitoring, SIEM-style alerting, access control systems, CCTV, incident command, crisis response, audit and compliance
- **Data & Engineering:** Python, SQL, Java, REST APIs, data pipelines, anomaly detection, large-scale data analysis, detection signal development (precision/recall)
- **AI & Systems:** LLM safety concepts, prompt injection detection, adversarial behavior analysis, monitoring systems, alerting pipelines
- **Identity & Systems:** IAM concepts, account abuse detection, authentication anomalies, identity-based risk analysis
- **Leadership & Program Execution:** Cross-functional leadership, stakeholder communication, SOP development, workflow automation, operational strategy

SECURITY PROJECTS

OSINT WorldView — Threat Intelligence Dashboard

- Built a production-style OSINT platform to monitor and analyze open-source threat signals and adversarial activity.
- Developed scalable backend services (FastAPI, Celery, PostgreSQL) for real-time data ingestion and processing.
- Implemented detection workflows to identify emerging abuse patterns and high-risk signals across sources.
- Created dashboards for incident tracking, signal quality, and operational visibility.

AI Malware Detection System

- Developed an ML-based malware classification system using the EMBER dataset.
- Engineered feature pipelines and trained LightGBM models to improve detection accuracy.
- Designed for scalable analysis and integration into automated security workflows.

Phishing Detection Chrome Extension

- Built a real-time phishing detection extension using machine learning.
- Trained on 10K+ URLs to identify malicious patterns and prevent user compromise.
- Integrated browser alerts to surface threats and improve user awareness.

EXPERIENCE

GSOC Analyst – AI Safety Operations — Allied Universal (Anthropic), San Francisco, CA Dec 2025 – Mar 2026

- Owned end-to-end incident response lifecycle (detection, triage, containment, remediation) for AI safety incidents.
- Led cross-functional response across Engineering, Policy, Security, and Product teams.
- Conducted investigations into jailbreaks, prompt injection, and coordinated abuse; mapped behaviors to adversarial TTPs.
- Translated risk signals into scalable detection systems and enforcement strategies.
- Built Python and SQL workflows to automate triage, enrichment, and anomaly detection.
- Improved monitoring and alerting systems (SIEM-style), increasing detection visibility.
- Leveraged log analysis and telemetry data to investigate anomalous behaviors and security events.
- Identified gaps in detection coverage and contributed to improvements in alerting logic.
- Established reporting, audit logging, and post-incident review frameworks aligned with security practices.

Site Supervisor – Security Operations — SureFox / MetroOne, Mountain View, CA

Nov 2024 – Dec 2025

- Led site-wide security operations including access control, incident response, and workforce management.
- Managed hiring, onboarding, scheduling, and performance of security personnel.
- Served as Incident Commander during high-severity events and crisis response scenarios.
- Oversaw CCTV, badge systems, and monitoring tools.
- Coordinated with IT and Corporate Security teams on system-level security issues.
- Supported investigations by correlating physical security events with access logs and system records.
- Developed SOPs and incident response protocols.
- Ensured compliance through audits, reporting, and continuous monitoring improvements.

Security Operations Commander (SOC) — Allied Universal, San Jose, CA

Apr 2023 – Nov 2024

- Led 24/7 GSOC operations across 12 sites, managing a team of 16 personnel and overseeing threat detection and incident response.
- Managed triage and escalation workflows across multiple systems.
- Coordinated incident response ensuring rapid containment of security events.
- Monitored multi-system alerts and analyzed patterns to identify recurring risks.
- Maintained situational awareness of threats and operational risks.
- Tracked KPIs and performance metrics to improve response effectiveness.
- Managed alarm systems, access control, and surveillance platforms.
- Mentored team members and enforced operational standards.

Software Engineering Intern — Lawrence Livermore National Laboratory

May 2023 – Aug 2023

- Developed backend services using Python for distributed systems supporting real-time data processing.
- Optimized SQL queries reducing latency by 40%.
- Built internal tools improving system workflows and access.
- Contributed to CI/CD pipelines and production debugging.
- Improved system observability through logging and monitoring enhancements.
- Contributed to system design discussions focused on scalability and distributed reliability improvements.

QA Analyst – Trust & Safety (USDS) — TikTok

Jul 2022 – Jan 2024

- Owned enforcement quality across high-risk trust and safety moderation systems, ensuring alignment with policy standards.
- Improved enforcement accuracy by 20% through detection gap analysis.
- Conducted root-cause investigations into false positives/negatives, improving detection precision and recall.
- Built SQL pipelines processing 500K+ daily events to develop detection signals.
- Led calibration programs improving reviewer consistency and reducing decision variance.
- Identified adversary patterns and emerging threat vectors.
- Partnered cross-functionally to improve detection systems and enforcement workflows.
- Translated data insights into operational improvements informing enforcement strategy.

VR Software QA Engineer — Meta

Apr 2022 – Jul 2022

- Tested AR/VR systems identifying performance issues and defects.
- Built automated debugging workflows improving efficiency by 35%.
- Designed and executed test plans across functional and performance scenarios.
- Analyzed logs to identify system-level issues and improve reliability.

Developer Operations – Trust & Safety Quality Analyst — Google Play

May 2021 – Apr 2022

- Investigated fraud and abuse networks across large-scale platform ecosystems, identifying systemic vulnerabilities and adversarial behaviors.
- Built dashboards tracking risk, detection performance, and trends.
- Performed root-cause analysis on enforcement gaps and policy issues.
- Managed high-priority escalations and enforcement decisions.
- Partnered cross-functionally with Product, Engineering, and Policy teams to improve detection systems.
- Analyzed behavioral patterns to inform risk mitigation strategies.
- Developed and owned operational playbooks improving investigation efficiency and consistency.

Developer Operations – Trust & Safety Quality Analyst — Meta

Nov 2019 – Apr 2021

- Reduced false negatives by 15% through calibration initiatives.
- Owned QA workflows across moderation systems handling graphic violence, extremism, and policy-sensitive content.
- Led audits identifying systemic enforcement gaps.
- Built SOPs and escalation frameworks adopted across global moderation teams.
- Partnered with policy teams to improve enforcement standards across edge-case scenarios.
- Analyzed moderation data to identify trends, anomalies, and enforcement gaps.
- Drove rollout of updated enforcement policies through training and operational alignment across global teams.

Security Supervisor — Allied Universal

Feb 2020 – Feb 2022

- Supervised daily security operations and incident response.
- Monitored access control systems, surveillance feeds, and alarms to ensure site security and compliance.
- Trained and onboarded personnel, reinforcing policies, procedures, and performance expectations.
- Maintained detailed incident logs and reporting documentation to support audits and operational tracking.
- Led post-incident investigations and root-cause reviews to prevent recurrence.

Child Trust & Safety Quality Analyst — YouTube

Aug 2018 – Sep 2019

- Managed high-precision moderation decisions in child safety domain under strict policy requirements.
- Reviewed large volumes of sensitive content ensuring consistent and accurate enforcement decisions.
- Applied policy frameworks to assess violations and determine appropriate enforcement actions while maintaining high accuracy.
- Identified early abuse patterns and emerging risks, driving detection improvements and informing policy refinements.
- Escalated high-risk cases for policy alignment in edge-case scenarios.
